

Leading the port industry with cutting-edge simulator

Published: Wednesday 8th September 2021

Our latest investment will transform our training capabilities and reduce risk as we embrace the benefits of today's technology at Bristol Port.

Port Operative, Matt Hannam operating our state of the art simulator.

At The Bristol Port Company, safety is paramount. By embracing cutting-edge technology, the Port hopes to provide comprehensive training with the help of our new 10-screen Vortex Master Simulator and further instil a safety culture.

During the summer months, ST Engineering Antycip installed the simulator in the newly refurbished Health and Safety Training Centre. It is capable of running numerous training modules for various port equipment including our gantry ship and Gottwald cranes. It can also simulate wind, rain and snow!

Nick Venn, Training Manager at the Bristol Port said: "We are absolutely delighted with the step-training that the crane simulator has provided. It has enabled our instructors to deliver a level of training far beyond the constraints of a classroom and we are already beginning to see the dividends of this state-of-the-art technology.
